

DIGITAL COMMUNICATION

Abhishek Yadav

CONTENTS

Preface

1. Introduction to Digital Communication	(ix)
1.1 Introduction	1-8
1.2 Signal	1
1.3 Analog to Digital Conversion	2
1.4 Elements of Digital Communication	3
1.5 History of Communications Systems	4
Review Questions	5
	8
2. Sampling of Base Band Signal	9-26
2.1 Introduction	9
2.2 Nyquist-Shannon Sampling Theorem	10
2.3 Sampling Techniques and Practical Aspects of Sampling	16
2.4 Comparison of Different Methods of Sampling	22
2.5 Sampling Theorem for Band Pass Signal	23
Review Questions	26
3. Digital Coding Techniques	27-51
3.1 Pulse Code Modulation	28
3.2 Differential Pulse Code Modulation (DPCM)	39
3.3 Delta Modulation/Sigma-Delta Modulation	42
3.4 Adaptive Delta Modulation	48
3.5 Continuously Variable Slope Delta Modulation (CVSD)	50
Review Questions	51
4. Digital Base Band Transmission	52-63
4.1 Line Coding	52
4.2 Power Spectrum of Line Coding Signals	55
4.3 Power Spectrum of Unipolar Formate (NRZ)	56
4.4 Power Spectrum of Polar Formate (In NRZ Formate)	57
4.5 Power Spectrum of Bipolar Formate (In NRZ Formate)	57
4.6 Power Spectrum of Manchester Coding (In NRZ Formate)	58
4.7 Intersymbol Interference (ISI)	59
Review Questions	63
5. Digital Multiplexing	64-70
5.1 Time Division Multiplexing (TDM)	64

5.2 Digital Multiplexer	67
5.3 The T1 Digital System	67
<i>Review Questions</i>	70
6. Digital Modulation Techniques	71-91
6.1 The Gram-Schmidt Procedure	72
6.2 Digital Modulation Techniques	73
6.3 Binary Amplitude-Shift Keying (BASK)	74
6.4 Binary Phase Shift Keying (BPSK)	78
6.5 Binary Frequency Shift Keying (BFSK)	80
6.6 Differential Phase Shift Keying (DPSK)	83
6.7 Quadrature Phase Shift Keying (QPSK)	84
6.8 Minimum Phase Keying (MSK)	87
6.9 Comparison of Coherent and Non-Coherent Detection	90
6.10 Comparison of BPSK and DPSK	90
6.11 Comparison of BPSK and QPSK	90
6.12 Comparison of QPSK and MSK	91
<i>Review Questions</i>	91
7. Detection of Digital Signals	92-113
7.1 Optimum Receiver for Data Communication	92
7.2 Optimum Filter	92
7.3 Calculation of Optimum—Filter Transfer Function	95
7.4 The Matched Filter	97
7.5 Coherent Reception : Correlation	101
7.6 Error Probability in the Coherent Detection of Binary ASK	102
7.7 Error Probability in the Coherent Detection of Binary Phase Shift Keying	104
7.8 Error Probability in the Coherent Detection of Binary Frequency Shift Keying	104
7.9 Error Probability of Coherent Detection of Quadrature Phase Shift Keying	106
7.10 Error Probability of MSK	108
7.11 Error Probability for Non-coherent Detection	108
7.12 Comparison of Noise Performance of Digital Systems	108
<i>Review Questions</i>	113
8. Information Theory	114-143
8.1 Concept of Information	115
8.2 Entropy	116
8.3 Rate of Information	117
8.4 Self Entropy	118
8.5 Joint Entropy and Conditional Entropy	118
8.6 Relation Between the Different Entropies	119

8.7 Mutual Information	120
8.8 Channel Capacity	121
8.9 The Transmission Efficiency and Redundancy	124
8.10 Kraft Inequality	125
8.11 Source Coding Theorem	126
8.12 Prefix Coding	126
8.13 Shannon-Fano Coding	127
8.14 Huffman Coding	129
8.15 Continuous Channel	132
<i>Review Questions</i>	143
9. Error Correcting Codes	186
9.1 Error Control Coding	145
9.2 Block Code (Arithmetic Codes/Group Codes)	146
9.3 Decoding of Linear Block Code Using Syndrome Matrix	149
9.4 Hamming Code	152
9.5 Decoder Designing for Syndrome	155
9.6 Cyclic Codes	157
9.7 Convolutional Coding	168
9.8 Code Tree	172
9.9 Code Trellis for Convolutional Encoder	177
9.10 State Diagram for Convolutional Coding	178
9.11 Maximum-likelihood Decoding of Convolutional Code	178
9.12 Sequential Decoding	180
<i>Review Questions</i>	186
