

Part of the five-volume
COM+ DEVELOPER'S REFERENCE LIBRARY

Microsoft

The essential reference set for anyone who develops
component-based applications for Microsoft® Windows®

COM+ Programmer's Guide

David Iseminger
Series Editor

BASED ON

mcgraw-hill

Contents

Acknowledgements	iii
Part 1 Introduction and Overview	1
Chapter 1 Welcome to the COM+ Developer's Reference Library	3
How the <i>COM+ Developer's Reference Library</i> is Structured.....	4
The Structure of the <i>COM+ Programmer's Guide</i>	5
How the COM+ Library is Designed.....	6
Chapter 2 Getting the Most Out Of Microsoft Developer Resources, Part One.....	7
The Microsoft Developer Network (MSDN).....	8
Comparing MSDN and MSDN Online	9
MSDN Subscriptions	11
Using MSDN.....	13
Using MSDN Online	19
The Windows Programming Reference Series.....	30
Chapter 3 Roadmap to using the COM+ Developer's Reference Library	31
What's In This Volume?	31
Volume 1, Part 1: Introduction and Overview	31
Volume 1, Part 2: COM+ Programmer's Guide.....	32
Volume 1, Part 3: COM+ Tools Programmer's Guide.....	35
Volume 1, Part 4: Microsoft Interface Definition Language (MIDL)	36
Volume 1, Part 5: Indexes	37
What's In The Other Volumes?	38
Volume 2: COM+ Reference	38
Volume 3: COM Fundamentals	39
Volume 4: Automation.....	40
Volume 5: Structured Storage and ActiveX.....	41
Where Can I Find More Information?	42
Chapter 4 Understanding Windows DNA 2000, and Where COM+ Fits In.....	45
Windows DNA Defined.....	45
About Windows DNA.....	46
About Windows DNA 2000.....	47
N-Tier Development Model	48
From Two-Tier to N-Tier Applications	49
User Services Tier and Windows DNA	51
Business Services Tier.....	54
Data Services Tier.....	57

Part 2 COM+ Programmer's Guide	61
Chapter 5 COM+ Application Overview	63
What is a COM+ Application?	63
Types of COM+ Applications	64
Parts of a COM+ Application	65
Developing COM+ Applications	66
Chapter 6 Designing COM+ Applications	69
COM+ Design Assumptions and Principles	69
Basic Guides for Designing COM+ Applications	71
Microsoft Tools for Building Distributed Applications	72
Designing the COM+ Application Using UML	73
The Conceptual Model: Application Requirements	74
The Logical Model: Application Definition and Planning	74
The Physical Model: Application Architecture	77
General Design Tips for Using COM+	78
Designing for Scalability	79
Designing for Availability	80
Designing for Security	80
Designing for Deployment	81
<i>Advanced COM+ Techniques for Specific Scenarios</i>	<i>82</i>
Deploying for Faster Communication	82
Optimizing Interactions With the COM+ Business Logic Tier	83
Optimizing Interactions Between the COM+ Business Logic Tier and the Presentation Tier	83
Optimizing Interactions Between the COM+ Business Logic Tier and the Data Tier	86
Chapter 7 COM+ Services Primer	87
Step 1: Creating A Transactional Component	88
Step 2: Extending A Transaction Across Multiple Components	92
Step 3: Reusing Components	95
Chapter 8 Services Provided By COM+	103
Contexts	104
Activation	105
Interception of Cross-Context Calls	106
Transaction Processing	107
Transaction Fundamentals	108
Distributed Transactions	111
Automatic Transactions Through COM+	114
Programming Transactions	118
Concurrency	125
Components and Threading	126

Synchronization.....	128
Security in COM+	130
Role-Based Security.....	131
Authenticating Clients.....	138
Impersonating Clients.....	139
Securing Library Applications.....	143
Securing Multi-Tier Applications.....	146
Programming Component Security	150
Object Pooling	154
How Object Pooling Works	155
Improving Performance with Object Pooling	156
Requirements for Poolable Objects	158
Pooling Transactional Objects	159
Controlling Object Lifetime and State.....	160
Using Object Constructor Strings.....	161
Just-in-Time (JIT) Activation.....	162
Setting the Done Bit	164
Transactions and JIT Activation	166
Object Pooling and JIT Activation	166
Queued Components	167
Queued Components Architecture.....	167
Messaging Solutions	168
Benefits of Queued Processing.....	169
Using Queues.....	170
Transactional Message Queuing	171
Queued Components Sample.....	172
Development Constraints.....	173
Developing Queued Components	175
Starting Queued Components.....	177
Identifying Queued Components.....	178
Activating Queued Components	179
Exception Handling	184
Using Queued Components Security.....	188
Queued Components Interdependencies	189
COM+ Events	189
COM+ Events Model.....	190
COM+ Events Architecture.....	191
Offering an Event	195
Delivering an Event.....	195
Composing Events with Queued Components	196
Filtering Events.....	196
COM+ Events Sample.....	198

The Shared Property Manager	198
Understanding the Shared Property Manager	199
Compensating Resource Managers (CRM)	200
Chapter 9 Writing COM+ Application Components	201
Writing Transactional Components	201
Writing Secure Components	202
Writing Poolable Components	203
Writing Queued Components	204
Writing Components for COM+ Events	204
Handling Errors in COM+	205
Strategies for Handling Errors in COM+	206
How COM+ Modifies Return Values	207
Fault Isolation and Failfast Policy	207
Finding the Source of an Error	208
Interpreting Error Codes	209
Troubleshooting	209
Contacting Support	210
Debugging COM+ Applications	210
Debugging Components Written in C++	211
Debugging Components Written in Visual Basic	213
Chapter 10 Creating and Configuring COM+ Applications	219
Creating COM+ Applications	220
Creating a New COM+ Application	220
Installing New Components	221
Importing Components	222
Removing a Component from a COM+ Application	223
Deleting a COM+ Application	223
Configuring COM+ Applications	224
Configuring Transactions	226
Configuring Synchronization	229
Configuring Security	232
Configuring Object Pooling	238
Configuring JIT Activation	241
Configuring Queuing	243
Configuring COM+ Events	245
Configuring Library Applications	246
Enforce Activation in Caller's Context	247
Conversion of MTS Packages to COM+ Applications	247
Automatic Conversion from MTS	248
Manual Conversion from MTS	248
COM+ Conversion Results and Issues	249

Automating COM+ Administration	250
Overview of the COMAdmin Objects	251
Retrieving Collections on the COM+ Catalog	257
Setting Properties and Saving Changes to the COM+ Catalog	259
Handling Administration Errors	262
Administration Operations within Transactions	263
MTS Administration Library	266
Chapter 11 Deployment and Registration of COM+ Applications.....	267
Deploying COM+ Applications	267
Deploying Application Proxies	268
The COM+ Catalog	269
COMREPL Replication Utility	270
Using COMREPL	271
What Gets Replicated	271
Replication Phases.....	273
File Management.....	273
Logging and Error Reporting	274
Part 3 COM+ Tools Programmer's Guide.....	275
Chapter 12 Microsoft Distributed Transaction Coordinator.....	277
Transaction Properties	278
Distributed Transactions.....	278
How Distributed Transactions Work.....	279
Application Programmer's View of Transactions	280
Resource Manager's View of Transactions	281
Transaction Manager's View of Transactions	282
Commit Coordination.....	282
Read-Only Commit Optimization.....	282
Delegated Commit Optimization	283
Bring Your Own Transaction (BYOT)	284
Creating BYOT Objects.....	284
Inheriting Manual Transactions	285
Other Transaction Standards	285
X/Open Distributed Transaction Processing Standard	285
How OLE Transactions Differs from X/Open DTP	286
Interoperability with Products that Comply with the X/Open DTP XA Standard	287
Using an OLE Transactions-Compliant Resource Manager with an X/Open-Compliant Transaction Processing Monitor	288
OSI Transaction Processing Format and Protocol	288
OLE Transactions Model.....	288
Using Microsoft Distributed Transaction Coordinator	289
Using Transactions in Application Programs	291

How an Application Program Initiates a Transaction.....	289
Using an Application Program to Update Two SQL Server Databases.....	289
Transaction Propagation: Application Program to Application Program.....	289
Transaction Commit.....	289
Transaction Abort.....	289
Developing OLE Transactions Resource Managers	289
Resource Manager Explicitly Initiated Transactions.....	289
How SQL Server Explicitly Initiates a Transaction	289
Resource Manager Implicitly Initiated Transactions	300
How SQL Server Implicitly Initiates a Transaction.....	301
Transaction Propagation from Application Program to Resource Manager.....	302
Life of a Transaction	306
Resource Manager Startup.....	307
Client Application Startup.....	308
Transaction Initiation.....	309
Resource Manager Enlistment	309
Creating an Export Object I.....	310
Creating an Export Object II.....	311
Exporting a Transaction I.....	311
Exporting a Transaction II.....	313
Enlistment in a Transaction I	314
Enlistment in a Transaction II	314
Transaction Commit Phase 1—Prepare I.....	315
Transaction Commit Phase 1—Prepare II.....	316
Transaction Commit Phase 2—Commit I	318
Transaction Commit Phase 2—Commit II	319
Transaction Recovery	320
Implementing a Resource Manager.....	321
Development Environment	321
Implementing Interfaces.....	322
Transaction Initiated by an In-Process Application Component.....	324
Transaction Propagation.....	325
Obtaining the Whereabouts	326
Obtaining a Transaction Dispenser from a Transaction	327
Participating in the Two-Phase Commit Protocol	327
Developing XA Compliant Resource Managers	328
Mapping OLE Transactions to the XA Protocol.....	329
Transaction States.....	329
Implementing Algorithms	330
Steps in the Life of an XA Transaction	331
XA Recovery Process.....	338
Mapping XA Interfaces.....	338

Using XA Compliant Transaction Manager Applications	339
Developing Caching Resource Managers.....	339
Using MS DTC with other TIP Transaction Managers	340
Background for TIP Extensions.....	341
TIP Extensions to OLE Transactions	343
TIP Usage Scenarios	343
Chapter 13 The Compensating Resource Manager	349
Using a CRM	349
Installing CRM Components	349
Start Up and Recovery	350
Developing a CRM	351
Normal Operation in the CRM	351
Recovery in the CRM	353
Error Handling in the CRM	354
Advanced CRM Topics.....	354
Registry Settings	354
CRM Log Files.....	356
Monitoring.....	356
Isolation	356
Object Pooling	356
Clusters	357
Troubleshooting the CRM	357
Design Suggestions	359
CRM Interfaces	360
Monitoring Interfaces.....	361
Using the Monitoring Interfaces.....	361
Chapter 14 Resource Dispensers	363
Resources	364
Dispenser Manager (DispMan)	364
Holder	365
Resource Dispenser Requirements	365
Implementing a Resource Dispenser as a COM Component	366
Threading Issues	366
Inventory Statistics Manager	367
Resource Pooling	367
Resources in Unenlisted Inventory	367
Resources in Enlisted Inventory.....	367
Resources In Unenlisted Use.....	367
Resources In Enlisted Use	367
Allocating Resources.....	368
Enlisting In a Transaction	368
