Communication Networking

AN ANALYTICAL APPROACH

Contents

Preface	xix
1 Introduction: Two Examples	1
1.1 Efficient Transport of Packet Voice Calls	1
1.2 Achievable Throughput in an Input-Queueing Packet Switch	7
1.3 The Importance of Quantitative Modeling in the Engineering of Telecommunication Networks	13
1.4 Summary	17
1.5 Notes on the Literature	17
Problems	18
2 Networking: Functional Elements and Current Practice	19
2.1 Networking as Resource Sharing	20
2.2.1 Analogy with the Operating System of a Computer	22
2.2 The Functional Elements	23
2.2.1 Multiplexing	24
2.2.2 Switching	32
2.2.3 Routing	38
2.2.4 Network Management	43
2.2.5 Traffic Controls and Timescales	45
2.3 Current Practice	47
2.3.1 Network Infrastructure	47
2.3.2 Networking Architectures	55
2.3.3 Telephone and ISDN Networks	62
2.3.4 X.25 and Frame Relay Networks	68
2.3.5 The Internet	70
2.3.6 Asynchronous Transfer Mode (ATM) Networks	77
2.4 Summary and Our Way Forward	85
2.5 Notes on the Literature	86
Problems	87

Part I Multiplexing	91
3 Multiplexing: Performance Measures and Engineering Issues	93
3.1 Network Performance and Source Characterization	93
3.1.1 Two Types of Traffic	94
3.1.2 A Historical Note	98
3.2 Stream Sessions in a Packet Network: Delay Guarantees	99
3.2.1 Network Delay, Delay Jitter, and Playout Delay	102
3.2.2 QoS Objectives	105
3.3 Circuit-Multiplexed Networks	107
3.4 Elastic Transfers in a Packet Network: Feedback Control	109
3.4.1 The File Transfer Abstraction	111
3.4.2 Congestion Control, Feedback, and Bandwidth Sharing	112
3.5 Packet Multiplexing over Wireless Networks	114
4 Stream Sessions: Deterministic Network Analysis	119
4.1 Events and Processes in Packet Multiplexer Models: Universal Concepts	119
4.1.1 Notation and General Results	121
4.2 Deterministic Traffic Models and Network Calculus	126
4.2.1 Reich's Equation and the Convolution Operator	127
4.2.2 Service Curves for Network Elements	132
4.2.3 Delay in a Service Element	136
4.2.4 Envelopes and Regulators	138
4.2.5 Network Performance and Design	143
4.3 Scheduling	148
4.3.1 Weighted Fair Queueing (WFQ)	148
4.4 Application to a Packet Voice Example	161
4.5 Connection Setup: The RSVP Approach	165
4.6 Scheduling (Continued)	168
4.7 Summary	171
4.8 Notes on the Literature	171
Appendix	172
Problems	176
5 Stream Sessions: Stochastic Analysis	179
5.1 Deterministic Calculus Can Yield Loose Bounds	179

5.2 Stochastic Traffic Models	183
5.2.1 Models for a Single Stream Source	183
5.2.2 Superposition of Several Streams	184
5.3 Additional Notation	188
5.4 Performance Measures	188
5.5 Little's Theorem, Brumelle's Theorem, and Applications	190
5.5.1 Little's Theorem	191
5.5.2 Invariance of Mean System Time	195
5.5.3 Generalization of Little's Theorem: Brumelle's Theorem	196
5.5.4 The M/G/1 Model: Formula for Mean Number of Bits in a Buffer	197
5.6 Multiplexer Analysis with Stationary and Ergodic Traffic	199
5.6.1 Analysis with Marginal Buffering	200
5.6.2 Analysis with Arbitrary Buffering	214
5.7 The Effective Bandwidth Approach for Admission Control	232
5.8 Application to the Packet Voice Example	237
5.9 Stochastic Analysis with Shaped Traffic	240
5.9.1 Analysis with Marginal Buffering	242
5.9.2 Analysis with Arbitrary Buffering	246
5.10 Multihop Networks	246
5.10.1 Splitting the End-to-End Quality of Service Objective	250
5.10.2 Marginal Buffering at Every Hop	251
5.10.3 Arbitrary Buffering at Every Hop: Effective Envelopes	252
5.11 Long-Range-Dependent Traffic	256
5.12 Summary	258
5.13 Notes on the Literature	259
Problems	261
6 Circuit-Multiplexed Networks	265
6.1 Introduction and Sample Applications	265
6.2 Multiclass Traffic on a Single Link	267
6.2.1 The Kaufman–Roberts Recursion	274
6.3 Overflow and Non-Poisson Traffic	281
6.3.1 Characterizing the Overflow Process	282
6.3.2 Approximations for Blocking Probability with Non-Poisson Traffic	288

5.2 Stochastic Traffic Models	183
5.2.1 Models for a Single Stream Source	183
5.2.2 Superposition of Several Streams	184
5.3 Additional Notation	188
5.4 Performance Measures	188
5.5 Little's Theorem, Brumelle's Theorem, and Applications	190
5.5.1 Little's Theorem	191
5.5.2 Invariance of Mean System Time	195
5.5.3 Generalization of Little's Theorem: Brumelle's Theorem	196
5.5.4 The M/G/1 Model: Formula for Mean Number of Bits in a Buffer	197
5.6 Multiplexer Analysis with Stationary and Ergodic Traffic	199
5.6.1 Analysis with Marginal Buffering	200
5.6.2 Analysis with Arbitrary Buffering	214
5.7 The Effective Bandwidth Approach for Admission Control	232
5.8 Application to the Packet Voice Example	237
5.9 Stochastic Analysis with Shaped Traffic	240
5.9.1 Analysis with Marginal Buffering	242
5.9.2 Analysis with Arbitrary Buffering	246
5.10 Multihop Networks	246
5.10.1 Splitting the End-to-End Quality of Service Objective	250
5.10.2 Marginal Buffering at Every Hop	251
5.10.3 Arbitrary Buffering at Every Hop: Effective Envelopes	252
5.11 Long-Range-Dependent Traffic	256
5.12 Summary	258
5.13 Notes on the Literature	259
Problems	261
6 Circuit-Multiplexed Networks	265
6.1 Introduction and Sample Applications	265
6.2 Multiclass Traffic on a Single Link	267
6.2.1 The Kaufman–Roberts Recursion	274
6.3 Overflow and Non-Poisson Traffic	281
6.3.1 Characterizing the Overflow Process	282
6.3.2 Approximations for Blocking Probability with Non-Poisson Traffic	288

6.4	Multiclass Networks	289
6.4.1	Analysis of the Network	294
6.5	Erlang Fixed-Point Approximation	295
6.5.1	Single-Rate Networks	295
6.5.2	Uniqueness of the Erlang Fixed Point	298
6.5.3	Evaluating the Fixed Point	300
6.5.4	Multiclass Networks	302
6.6	Admission Control	303
6.7	Waiting Room and Retrials	306
6.8	Channel Allocation in Cellular Networks	307
6.8.1	Overview	307
6.8.2	Comparing Dynamic and Fixed Channel Allocation Schemes	310
6.9	Wavelength Allocation in Optical Networks	313
6.10	Summary	318
6.11	Notes on the Literature	319
	Problems	320
7	Adaptive Bandwidth Sharing for Elastic Traffic	323
7.1	Elastic Transfers in a Network	323
7.2	Network Parameters and Performance Objectives	325
7.2.1	Propagation Delay and Round-Trip Time	325
7.2.2	Performance Measures: Transfer Throughput	327
7.3	Sharing a Single Link	328
7.3.1	Control Objectives	329
7.4	Rate-Based Control (RBC)	330
7.4.1	Explicit-Rate Feedback	331
7.4.2	Queue-Length-Based Feedback	335
7.4.3	A Simple Rate Adaptation: ODE Model	335
7.4.4	Additive Increase, Multiplicative Decrease: ODE Model	338
7.4.5	The ABR Service in ATM Networks	342
7.5	Window-Based Control (WBC): General Principles	348
7.6	TCP: The Internet's Adaptive Window Protocol	354
7.6.1	Slow-Start and Congestion Avoidance	355
7.6.2	Receiver Buffer and Cumulative ACKs	356
7.6.3	Packet Loss Recovery and Congestion Control	358

7.6.4	Single Connection: Analysis with Buffer Overflow	363
7.6.5	A Stochastic Model for a Wide Area TCP Connection	373
7.6.6	TCP with Explicit Feedback (RED and ECN)	381
7.6.7	Randomly Arriving, Finite-Volume Transfers	390
7.6.8	Long-Range Dependence of TCP-Controlled Traffic	403
7.7	Bandwidth Sharing in a Network	408
7.7.1	Max-Min Fair Bandwidth Sharing and Algorithms	411
7.7.2	Network Utility Optimization and Algorithms	417
7.7.3	Randomly Arriving Transfers in a Network	422
7.7.4	TCP and Fairness	423
7.8	Summary	425
7.9	Notes on the Literature	426
	Problems	430
8	Multiple Access: Wireless Networks	435
8.1	Bits over a Wireless Link: Principles, Issues, and Trade-Offs	437
8.1.1	Simple Binary Modulation and Detection	438
8.1.2	Getting Higher Bit Rates	443
8.1.3	Channel Coding and a Fundamental Limit	446
8.1.4	Delay, Path Loss, Shadowing, and Fading	449
8.2	Bits over a Wireless Network	457
8.3	TCP Performance over Wireless Links	460
8.4	Adaptive and Cross-Layer Techniques	467
8.5	Random Access: Aloha, S-Aloha, and CSMA/CA	474
8.5.1	Non-Carrier-Sensing Protocols: Aloha and Slotted Aloha	474
8.5.2	Carrier-Sensing Protocols	484
8.6	Wireless Local Area Networks	490
8.6.1	The IEEE 802.11 Standards	491
8.6.2	Multiple Access in IEEE 802.11	493
8.6.3	Performance Modeling and Throughput	495
8.7	Wireless Ad Hoc Networks	501
8.7.1	Topology and Connectivity	504
8.8	Link Scheduling and Network Capacity	509
8.8.1	Scheduling Constraints	510
8.8.2	Centralized Scheduling	512

8.8.3 Capacity of a WANET	516
8.9 Wireless Sensor Networks: An Overview	518
8.10 Summary	521
8.11 Notes on the Literature	522
Appendix: Probability of Connectivity in a One-Dimensional Ad Hoc Network	524
Problems	527
Part II Switching	533
9 Performance and Architectural Issues	535
9.1 Performance Measures	535
9.1.1 Packet Switches	535
9.1.2 Circuit Switches	539
9.2 Architectural Issues	540
9.2.1 Packet Switch Organization	540
9.2.2 Circuit Switches	545
10 Queueing in Packet Switches	547
10.1 FIFO Queueing at Output and Input	547
10.1.1 Saturation Throughput and Capacity (*)	550
10.1.2 Saturation Throughput of an IQ Switch	556
10.1.3 Discussion	560
10.2 Combined Input-Output Queueing	560
10.2.1 The Knockout Principle	560
10.2.2 Parallel Fabrics	561
10.2.3 Fabrics with Speedup	562
10.3 Delay Analyses	564
10.3.1 Output-Queued Switch	564
10.3.2 Input-Queued Switch	567
10.3.3 CIOQ Switch with Parallelism	569
10.4 Variable-Length Packet Switches	570
10.5 Non-FIFO Input-Queued Switches	574
10.5.1 Virtual Output Queueing and Maximum-Weight Matching	574
10.5.2 Maximal Matching for VOQ Switches	578
10.6 Emulating Output Queueing with Input Queueing	587

10.7 Summary	592
10.8 Notes on the Literature	592
Problems	594
11 Switching Fabrics	597
11.1 Elementary Switch Structures	597
11.1.1 Shared-Medium Switches	597
11.1.2 Shared-Memory Switches	600
11.1.3 Crossbar Switches	602
11.2 Switching Networks	605
11.2.1 Blocking in Switching Networks	607
11.2.2 Clos Networks	610
11.2.3 Construction of Large Switches	614
11.2.4 Setting Up the Paths	616
11.3 Self-Routing Networks	619
11.4 Multicast Packet Switches	630
11.5 Summary	633
11.6 Notes on the Literature	634
Problems	635
12 Packet Processing	637
12.1 Addressing and Address Lookup	637
12.1.1 Addressing	637
12.1.2 Addressing in IP Networks: Subnets and Classless Interdomain Routing	642
12.2 Efficient Longest Prefix Matching	644
12.2.1 Level-Compressed Tries	646
12.2.2 Hardware-Based Solutions	654
12.3 Packet Classification	656
12.4 Other Design Issues	660
12.5 Network Processors	662
12.6 Summary	665
12.7 Notes on the Literature	665
Problems	666

Part III Routing	669
13 Routing: Engineering Issues	671
14 Shortest Path Routing of Elastic Aggregates	677
14.1 Elastic Aggregates and Traffic Engineering	677
14.2 Optimal Routing	682
14.3 Algorithms for Shortest Path Routing	695
14.3.1 Dijkstra's Algorithm	696
14.3.2 The Bellman-Ford Algorithm	697
14.3.3 A Generalized Dijkstra Algorithm	698
14.4 Routing Protocols	701
14.4.1 Distance Vector Protocols	702
14.4.2 Link State Protocols	705
14.4.3 Exterior Gateway Protocols	706
14.5 Summary	708
14.6 Notes on the Literature	709
Problems	709
15 Virtual-Path Routing of Elastic Aggregates	713
15.1 On-Demand Routing	713
15.2 Limitations of Min Hop Routing	715
15.3 Formulations of the Routing Problem	716
15.3.1 Minimum Interference Routing: Formulation and Heuristic	716
15.3.2 Another Formulation and Heuristic	722
15.3.3 Comparison	729
15.4 Multiprotocol Label Switching (MPLS)	732
15.5 Summary	736
15.6 Notes on the Literature	736
Appendix: The Maxflow Mincut Theorem	737
Problems	738
16 Routing of Stream-Type Sessions	741
16.1 QoS Routing	741

16.2 Nonadditive Metrics	744
16.3 Additive Metrics: Rate-Based Multiplexers	745
16.3.1 Finding Feasible Routes	745
16.3.2 An Upper Bound on Performance	749
16.4 Additive Metrics: Non-Rate-Based Multiplexers	759
16.4.1 The Multiconstrained Feasibility Problem	760
16.5 Summary	772
16.6 Notes on the Literature	773
Problems	773
Part IV Appendices	777
A Glossary of Terms and Notation	779
A.1 Technical Terms and Expansions of Acronyms	779
A.2 Units	785
A.3 Miscellaneous Operators and Mathematical Notation	786
A.4 Vectors and Matrices	786
A.5 Asymptotics: The O , o , and \sim Notation	787
A.6 Probability	788
B A Review of Some Mathematical Concepts	791
B.1 Limits of Real Number Sequences	791
B.2 A Fixed-Point Theorem	793
B.3 Probability and Random Processes	795
B.3.1 Useful Inequalities	795
B.3.2 Convergence Concepts	795
B.3.3 Laws of Large Numbers and the Central Limit Theorem	798
B.3.4 Stationarity and Ergodicity	798
B.4 Notes on the Literature	801
C Convex Optimization	803
C.1 Convexity	803
C.2 Local and Global Optima	804
C.3 The Karush–Kuhn–Tucker Conditions	805
C.4 Linear Programming	809

C.5	Duality	810
C.6	Sensitivity of the Optimal Solution	815
D	Discrete Event Random Processes	819
D.1	Markov Chains and Some Renewal Theory	819
D.1.1	Discrete Time Markov Chains	819
D.1.2	Continuous Time Markov Chains	827
D.1.3	Renewal Processes	831
D.1.4	Renewal Reward Processes	832
D.1.5	Markov Renewal Processes	834
D.1.6	The Excess Distribution	836
D.1.7	Phase Type Distributions	837
D.1.8	Poisson Arrivals See Time Averages (PASTA)	838
D.1.9	Level Crossing Analysis	841
D.2	Some Important Queueing Models	843
D.2.1	The M/G/c/c Queue	843
D.2.2	The Processor Sharing Queue	844
D.2.3	Symmetric Queues	846
D.3	Reversibility of Markov Chains, and Jackson Queueing Networks	848
D.3.1	Reversibility: Criteria and Consequences	848
D.3.2	Jackson Networks	856
D.4	Notes on the Literature	865
E	Complexity Theory	867
	Bibliography	873
	Index	895
